Obanikoro, Lagos, 100252, Nigeria | +234 816 882 9686

SUMMARY

AI Automation Engineer with 5+ years of experience designing, implementing, and optimizing AI-powered workflows, automation systems, and operational infrastructures. Strong hands-on experience with N8N, Zapier, Make.com, OpenAI APIs, Claude, REST APIs, webhooks, and CRM platforms to reduce manual work, improve data accuracy, and scale business processes. Delivered measurable impact including 60% reduction in manual work, 35% improvement in CRM data accuracy, and 25% faster operational decision-making. Experienced building production-ready workflows with monitoring, validation, cost-conscious API usage, troubleshooting, and clear process documentation.

CORE COMPETENCIES

AI Automation • Workflow Automation • N8N • Zapier • Make.com • OpenAI API Integrations • ChatGPT • Claude AI • Prompt Engineering • AI Operations • Business Process Automation • Workflow Architecture • Process Optimization • API Cost Optimization • Automation Monitoring • Error Alerts • REST APIs • Webhooks • JSON Data Handling • CRM Systems • HubSpot • GoHighLevel • Airtable • Google Sheets • Reporting Dashboards • Python • JavaScript • Data Validation • Workflow Troubleshooting • SOP Documentation • Cross-Functional Collaboration • Technical Communication • Independent Project Ownership • Scalable Solution Design

WORK EXPERIENCE

Workflow Automation & Systems Lead
SunLife Corporate Housing LLC | Remote

Jan 2025 – Present

- Led optimization and maintenance of automation systems across CRM, reporting, and operational workflows, reducing manual processes by 60% and improving CRM data accuracy by 35%.
- Built and maintained 10+ production automation systems using Zapier, APIs, webhooks, and structured workflow logic across operational platforms.
- Built automation monitoring and alerting systems using workflow logs, validation checks, and failure notifications to catch errors before they impacted reporting or CRM accuracy.
- Optimized API usage by reducing unnecessary workflow runs, filtering invalid records before execution, and improving data validation before CRM sync.
- Used AI-assisted workflows with ChatGPT and Claude to structure, validate, and process operational data before syncing into CRM and reporting systems.
- Designed reporting systems and operational dashboards that improved leadership decision-making speed by 25%.
- Documented workflow architecture, automation logic, and SOPs to support system scalability and team adoption.

Automation & Marketing Systems Engineer (Project-Based)
Hosvi Marketing Agency | Remote

2025

- Designed and optimized GoHighLevel and HubSpot automation workflows supporting lead generation, onboarding, CRM management, and operational execution.
- Integrated OpenAI-powered logic into lead qualification workflows using ChatGPT, Claude, HubSpot APIs, and automation tools, improving lead conversion by 30%.
- Designed prompt-based workflows for structured data extraction, lead scoring, and automated CRM updates.

- Audited and improved CRM pipeline structures, automation logic, and follow-up workflows to improve usability and system reliability.
- Reduced unnecessary automation steps by improving trigger logic, filtering low-quality inputs earlier, and optimizing workflow paths for faster execution.
- Added alerting and test flows to monitor failed lead syncs, missed follow-ups, and broken workflow triggers.
- Reduced automation deployment time by 80% through reusable workflow frameworks and standardized automation systems.

Workflow Automation Engineer (Project-Based)

2025

Advitavel | Remote

- Architected and optimized operational automation systems integrating CRM workflows, Airtable databases, and communication platforms.
- Built scalable onboarding and workflow automation infrastructure using Make.com, APIs, and structured automation logic.
- Improved workflow visibility, reporting accuracy, and operational efficiency through process redesign and automation optimization.
- Collaborated with stakeholders to identify operational bottlenecks and implement scalable system improvements.

Automation Specialist (System Integration Projects) **Purchasingchoice Real Estate Company | Remote**

Feb 2024 – Jan 2025

- Built and optimized CRM and operational workflows using GoHighLevel, Zapier, APIs, and advanced automation logic, reducing workflow delays by 20%.
- Audited automation systems, diagnosed trigger failures, and resolved API payload issues and CRM data inconsistencies.
- Improved system scalability and reliability through validation workflows, workflow redesign, and structured data handling.
- Supported operational reporting and decision-making through optimized CRM tracking and automation systems.

Operations Assistant (Ops and Systems) **Fidson Healthcare Plc. | Remote**

Mar 2021 – Feb 2024

- Coordinated operational workflows, task tracking systems, and scheduling processes, reducing scheduling conflicts by 50%.
- Maintained structured documentation and workflow systems supporting operational consistency and efficiency.
- Supported cross-functional operational processes through standardized systems and process organization.

NOTABLE PROJECTS

- **N8N AI Workflow Automation System:** Built an N8N-based workflow prototype for lead intake, AI-assisted qualification, CRM updates, and internal notifications, reducing manual review effort by an estimated 50%.
- **OpenAI-Powered Lead Qualification System:** Integrated ChatGPT, Claude, and HubSpot APIs to analyze incoming lead data, structure fields, score leads, and trigger follow-up workflows, improving conversion by 30%.
- **Automation Monitoring & Alerting System:** Built validation checks and alert workflows to detect failed syncs, missing fields, and broken triggers before they affected CRM reporting.
- **API & Workflow Cost Optimization:** Reduced unnecessary automation runs by improving filters, trigger conditions, and data validation before API calls.

- CRM Migration & Workflow Redesign: Reduced CRM data inconsistencies by 40% through structured field mapping, workflow redesign, and validation logic.
- End-to-End Automation Infrastructure: Designed automation systems connecting CRM, onboarding, reporting, and operational workflows.

AUTOMATION WALKTHROUGH

- GoHighLevel Workflow Walkthrough:
<https://www.loom.com/share/a34f595364654f23a2ff77475ee6c865>
- Automation System Walkthrough:
<https://www.loom.com/share/8d9b8186ca3e4a709f326fdc13e0c8b3>

EDUCATION

- **University of Lagos** - Bachelor of Science – Public Administration (**First Class Honours**)

CERTIFICATION

- HubSpot CRM Certified Specialist — HubSpot Academy
- HubSpot Digital Marketing Certified — HubSpot Academy
- GoHighLevel Mastery — GoHighLevel Academy
- Zapier Expert Certification — Zapier Academy
- Make.com Automation Mastery — Udemy
- AWS Cloud Practitioner — Amazon Web Services
- Python Automation Bootcamp — Udemy
- JavaScript for Automation — Udemy

WHY I AM IDEAL FOR THIS ROLE

- 5+ years designing and optimizing workflow automation systems across operations, CRM, and reporting environments.
- Strong hands-on experience with N8N, Zapier, Make.com, OpenAI APIs, Claude, REST APIs, and webhooks.
- Proven ability to identify workflow inefficiencies and implement scalable automation solutions.
- Experienced building production-grade automation systems with monitoring, validation, alerting, and reliability controls.
- Skilled in reducing manual work, improving CRM data accuracy, and optimizing workflow performance.
- Strong troubleshooting ability across automation platforms, APIs, CRM systems, and data pipelines.
- Comfortable working independently in fast-paced remote environments while collaborating with leadership and operations teams.
